4-Hour Timeline

1

Phase 1: Planning

Research integration methods, define scope, and outline assumptions. This phase sets the foundation for successful execution. Make sure to record a video describing your plan.

2

Phase 2: Execution

Develop the codebase and prepare documentation. Bring your implementation plan to life with quality code.

Make sure to record a video describing your process.

3

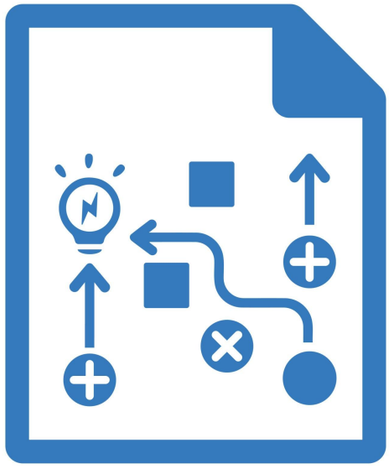
Phase 3: Submission

Fill the form (link at the end of this presentation) with all your hard work done.

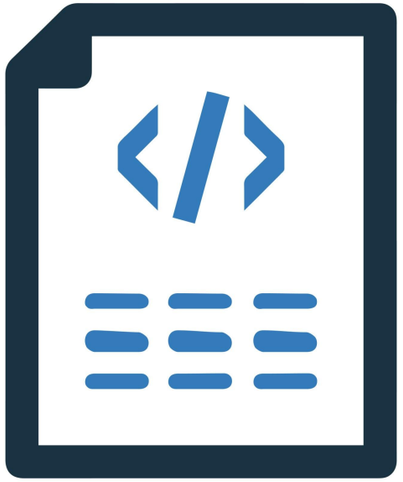
Required Deliverables

Three essential components must be submitted:

1. **Implementation Plan**



2. **Codebase**



3. **Form Submission**

Scoring Criteria

In Order of Priority

AI Tool Usage
Effective and correct use of AI tools throughout the development process.

Codebase Quality
Design patterns, unit tests, and end-to-end tests demonstrating software engineering best practices.

Documentation
Clear scope definition, assumptions, and operational details that make your solution accessible.

Video Presentation
Clarity, structure, and communication quality in your 2-minute explanation.

Agentic AI
Innovative use of AI agents to enhance productivity and problem-solving.

Execution Quality
Design, deployment, and overall implementation excellence.

What Success Looks Like

Resourcefulness

Navigate ambiguity with confidence. The concise task description assesses your initiative and adaptability.

Strategic AI Use

Leverage AI tools effectively—not as crutches, but as accelerators for research, code generation, and problem-solving.

Clear Communication

Document assumptions, explain design decisions, and present your approach with confidence and clarity.
